WALLENSTEIN CR60 WOOD CHIPPER — The Wallenstein CR60 commercial wood chipper features new innovations in auto feed controls, improving productivity through its new IntelliFeed electronic feed control system with Rapid Recovery. Traditional auto feeders only have two settings, on and off. The CR60's IntelliFeed continuously monitors the rotor's rpm, slowing the rollers' speed as needed. IntelliFeed continues the chipping at a volume that best matches its rpm. If the CR60's rpm reaches its minimum setting, Wallenstein's Rapid Recovery technology takes over, automatically reversing the log away from the rotor. Rapid Recovery

eliminates friction against the rotor, allowing the rotor to increase rpm's faster. The Wallenstein CR60's chipping capacity is 7" h x 11" w, slab-style opening with standard dual feed rollers. The CR60 uses a 38Hp Kohler engine and is ideal for tree service contractors, landscapers, golf courses and rental fleets. Contact EMB Mfg about the Wallenstein CR60 commercial wood chipper. 1-877-695-9283, www.embmfg.com. See our ad on page 40. Reader No. 900

LAND PRIDE ALL PURPOSE SEEDER — The Land Pride All Purpose Seeder is available in Cat. 1-4', 5', 6' or 7' widths, features an all-welded seedbox construction and watertight lid to keep seed dry, and is designed to work ideally in a prepared seedbed and overseeding. Applications include excellent combination planting and

cultivation tools for golf courses, school systems, municipalities, rental yards, construction companies, sports fields and college campuses. Their narrower widths make them effective in seeding applications on residential lots, grassy medians, grassy parkings or right-of-ways adjacent to sidewalks, community parks, sporting facilities and golf courses. Unlike wider models of seeders, these units will do a more effective job of planting in areas where undulations, moguls and depressions are prevalent. The seed box is equipped with Land Pride's standard fluted seed cups and an agitator, enabling highly accurate and uniform delivery of most turfgrass seeds as well as a wide variety of other seeds ranging from alfalfa to peas. The spiked front rollers can be adjusted for more or less "crab-action cultivation," making them an ideal choice for opening up and planting in hard or thatchy soil profiles. See our ad on page 49. KUBOTA ZD300 REAR DISCHARGE ZERO-TURN MOWERS — Safety is the chief concern when mowing in public areas such as parks or boulevards which is driving the growing trend in rear discharge mower decks. Kubota has announced the arrival of three full-size commercial ZD300 zero-turn mowers with the new 60"

Fabricated Rear Discharge Mower Deck. These new 5.5" deep decks feature front swivel-type anti-scalp wheels and a protective (replaceable) 1" round steel trim edge. Driven from the proven twin Kubota HST transmission, the gear box powers three cast iron spindles with Kubota's Double V-Belt system maintaining high blade tip speed. Rear fenders have been added to keep grass and debris away from the operator. Whether commercial, municipal or residential, the addition of the rear discharge models to the popular ZD300 Series from Kubota provides a safe mowing solution for those who demand power and performance. To test a Kubota gasoline or Kubota Diesel Tier IV model today call your local dealer or visit Kubota.ca for more details. See our ad on Inside Back Cover. Reader No. 902
