

Equipment Showcase 2012

THE JOHN DEERE 318D & 320D SKID STEERS are powered by a John Deere PowerTech™ 2.4-L turbocharged E diesel engines that are IT4 certified with Auto-Idle. Compatible with more than 100 available Worksite Pro™ attachments allow contractors to expand their business opportunities. Fatigue-beating joysticks allow the operator to work more comfortably, precisely and productively. Both models feature 24 per cent larger cab areas than their predecessors and provide best-in-class visibility. In addition, the cab is sealed and pressurized to keep out dust and noise. Creature comforts include suspension seats, cup holder, 12-volt power port, additional storage, and optional AM/FM/weatherband radio. Contractors can opt for 2-speed and increase travel speed up to 11mph.

BOBCAT'S E26 COMPACT EXCAVATOR is hard-working with a light footprint. The newest compact excavator in Bobcat Company's lineup, the E26, has an operating weight of 5,690 pounds and an overall width of 59 inches. The excavator is powered by a 27-horsepower diesel engine that is Interim Tier 4 compliant. The unit's minimal 0.8 inches of tail overhang allows the machine to fit in tight surroundings, and it leaves a lighter footprint than the 325 and 425 models it replaces. Ideal for landscaping and grounds maintenance applications, this excavator is a complement to larger machines when space is constricted, as well as perfectly capable of completing entire jobs on its own.

FOLEY UNITED'S 465 AUTOMATED ROTARY BLADE GRINDER is the most innovative product to enter the turf care industry in years! The enclosure system for dust and noise, time savings, and the ability to reproduce the OEM grind surface are only a few of the many benefits that the new 465 offers. The unique design of the 465 features automated infeed cycles and a built-in blade balancing system

that makes the grinding process safer and more efficient than ever thought possible! While the OEM's recommend grinding every eight to 10 hours of use for maximum engineered performance, the 465 will reduce your labour, will reduce your effort, and provide the best grind possible for your cutting unit investment. More stress on hydraulics, added strain on your engine, and increased fuel consumption is typical when blades are not sharpened regularly. So, if you are interested in elevating performance, increasing cut quality, and being more productive, step up to the latest technology of Foley United's new 465!

KUBOTA INTRODUCES THE NEW RCL100F-F36, 100" FLEX MOWER DECK – F3680 COMBINATION. The NEW RCL100F-F36 is specifically designed to increase productivity by offering a 100" (8' 4") wide cut while delivering the cut quality of five 21" push mowers. Each cutting deck accurately follows the contours of the most challenging terrain without scalping or damaging the turf. This powerhouse combination matches the productivity and cut quality of higher cost options and can cut acre for acre on half the fuel consumed by other mowers because of its efficient belt drives. It can be folded to 78" and raised for high speed transport. For more information, visit www.kubota.ca to locate your local dealer.

The **RTA12 & RTR12 SERIES ROTARY TILLERS FROM LAND PRIDE** till soil for seedbed and planting preparation with uses and applications in landscaping, gardens, and residential areas. They are adapted for 15-50 horsepower tractors with Category I three-point hitch mounting, 540 rpm PTO speed and are Quick-Hitch adaptable. The reverse rotation tillers (RTR12 Series) tend to achieve greater depth penetration resulting in moving and pulverizing more soil as well as burying more of the residue in the soil. The RTA12 and RTR12 Rotary Tillers are 2 of the 15 new products introduced by Land Pride for 2011. For more information on any of these products, and to locate your nearest dealer, visit landpride.com.
